---	-----------

Todas las juntas son de gran resistencia a las altas y bajas temperaturas.

FILTROS ACEITE

Oil Filters

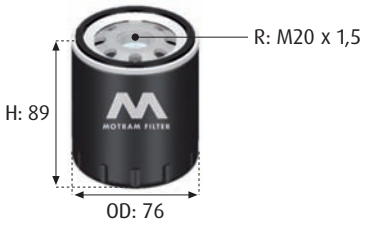

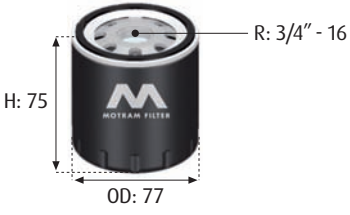

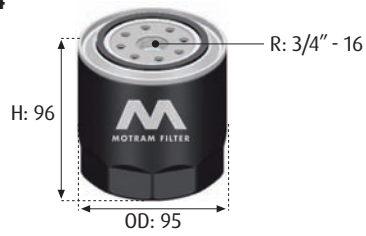

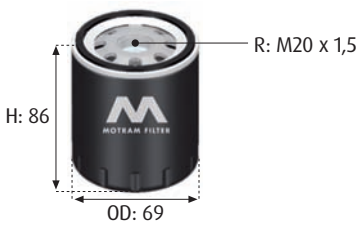

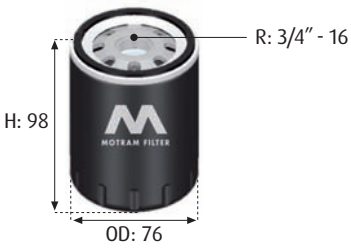

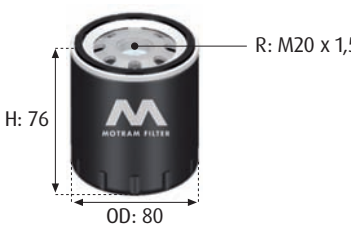

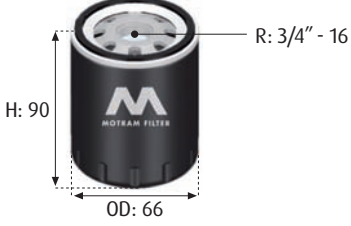

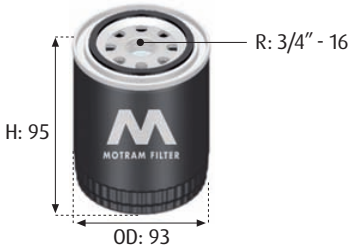

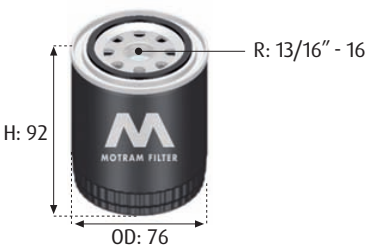

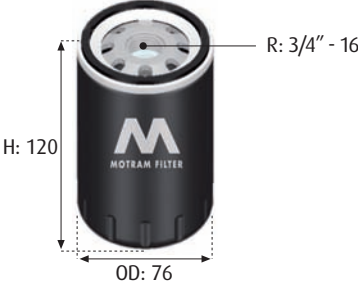

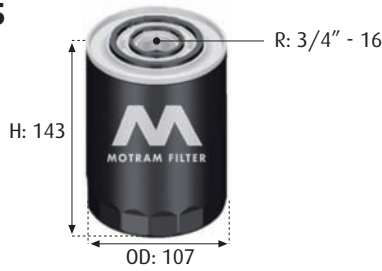

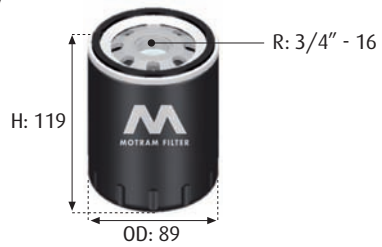

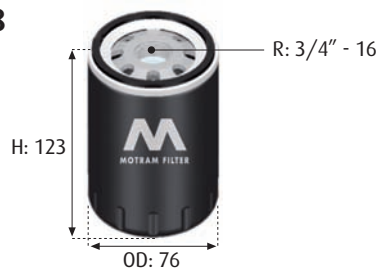

La función principal de este filtro es **proteger el aceite lubricante de las impurezas** que le puedan llegar antes de iniciar su recorrido por el circuito de engrase del motor.

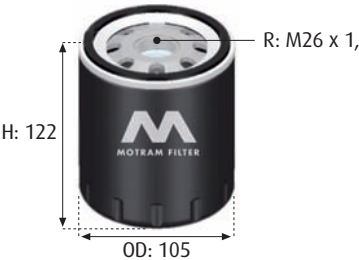

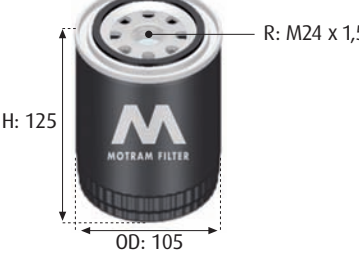

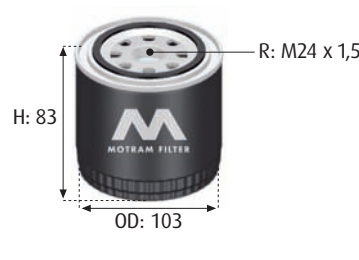

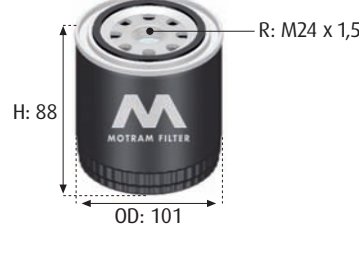

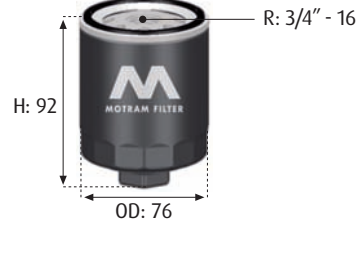

Evita que las partículas metálicas que se desprenden del rozamiento de algunos elementos y los residuos de combustión pasen al aceite. Sin el filtro, todos estos residuos llegarían a las piezas del motor y provocarían averías en los pistones y camisas así como obstrucciones en cualquier pieza móvil del motor, por lo tanto es importante que este filtro esté en buen estado y se cambie regularmente.

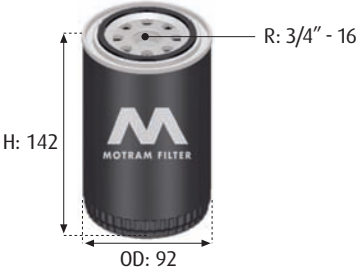

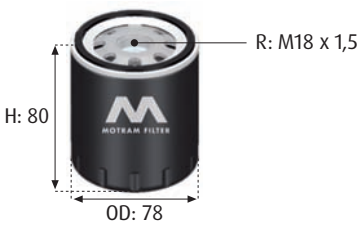

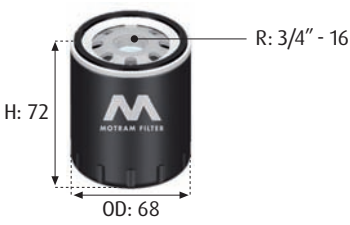

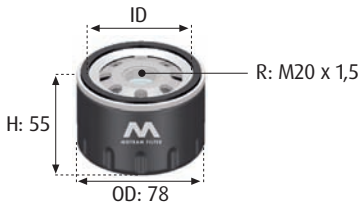

Filtro fabricado con materiales de alta calidad como papel **Ahlstrom**, resina de epoxi, caucho con espuma de poliuretano, que resisten las altas temperaturas y la corrosión. El sellado con caucho nitrilo evita las fugas de aceite al soportar altas temperaturas sin endurecerse.

FILTROS COMBUSTIBLE

Fuel Filters

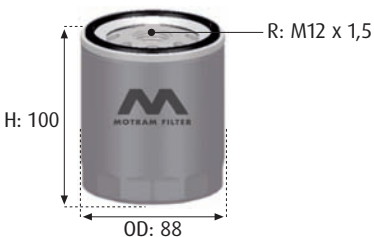

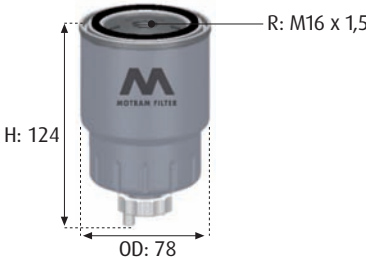

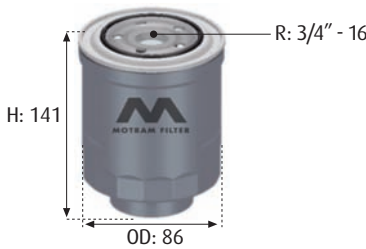

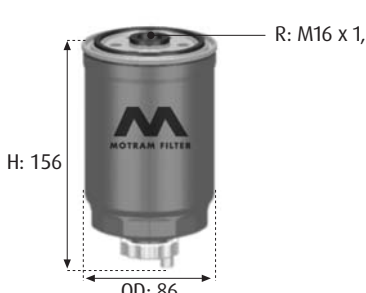

El filtro de **combustible** protege el sistema de inyección, bomba de presión o circuito de alimentación de las impurezas del depósito de carburante que podrían taponarlos.

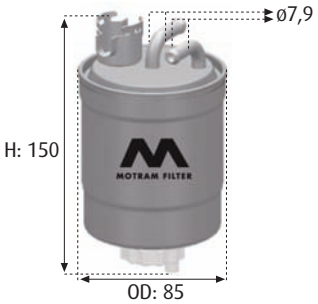

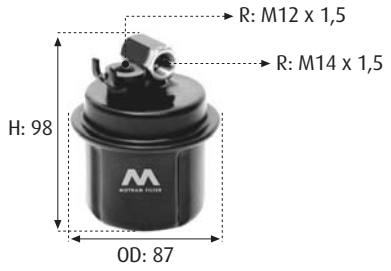

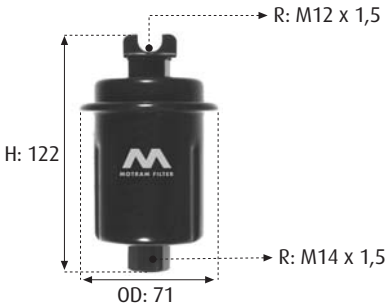

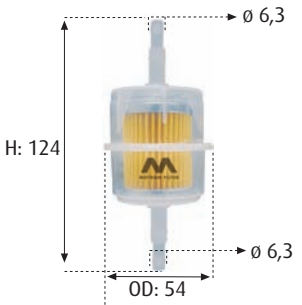

Si un filtro está obstruido, el trabajo de la bomba de gasolina se vuelve más complicado al tener que bombear más combustible a los inyectores.

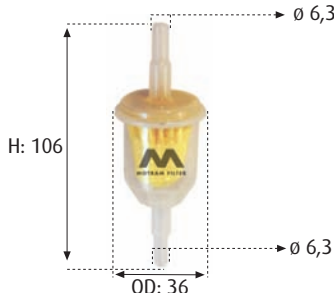

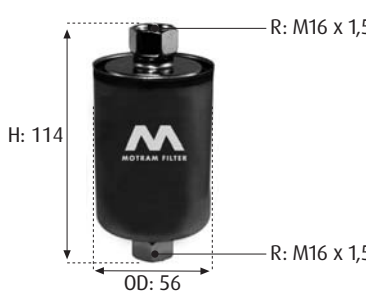

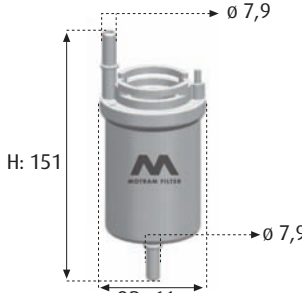

Gracias al **enrollado en espiral del papel**, el filtro tiene más área de filtrado lo que permite una precisión y eficacia en el filtrado de hasta el 98%.

FILTROS AIRE

Air Filters

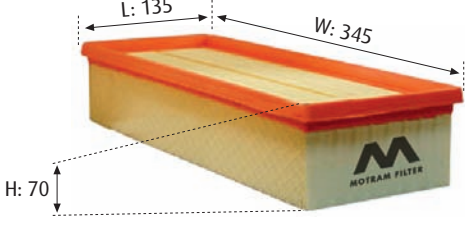

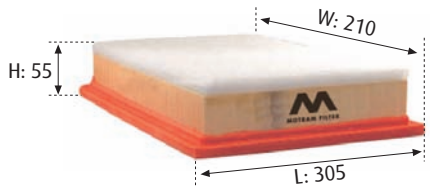

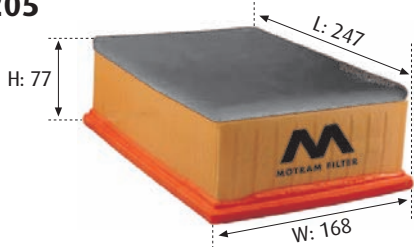

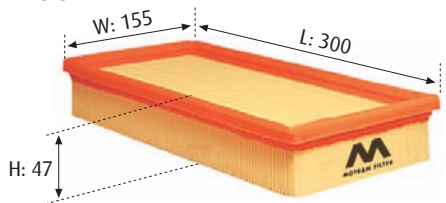

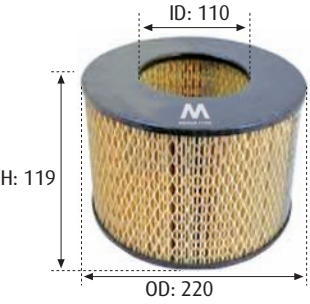

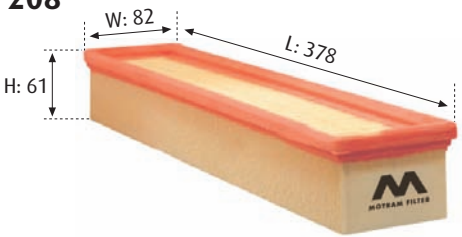

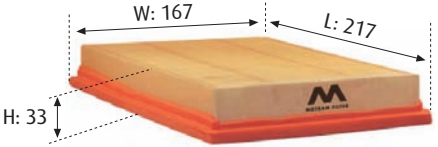

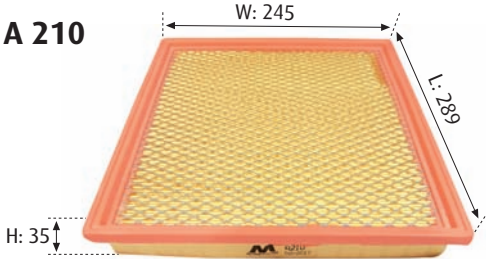

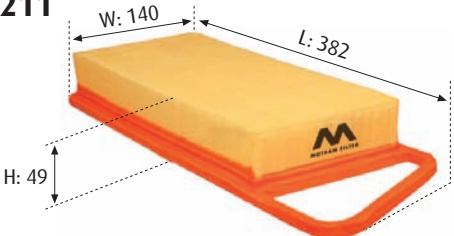

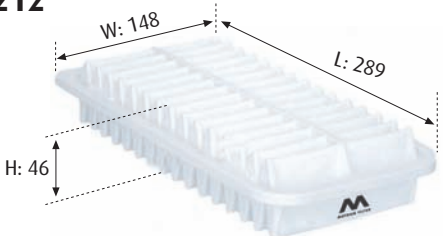

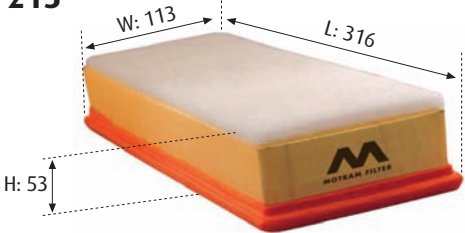

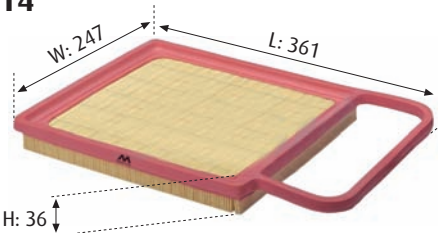

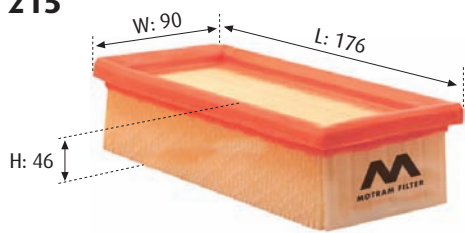

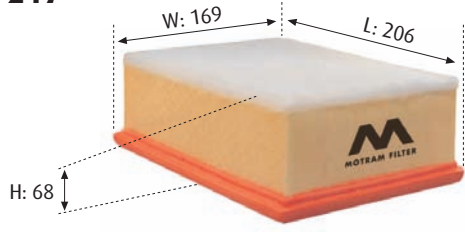

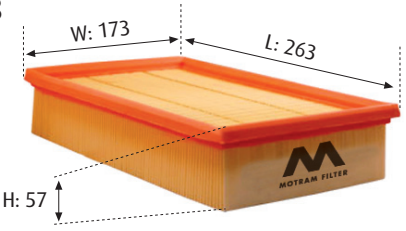

Fabricado con celulosa de calidad avanzada y tejido de algodón puro, caucho curado con poliuretano, polipropileno, sus pliegues espaciados regularmente permiten una gran área de filtrado, suficiente aire y **eficiencia en el filtrado del 98%**.

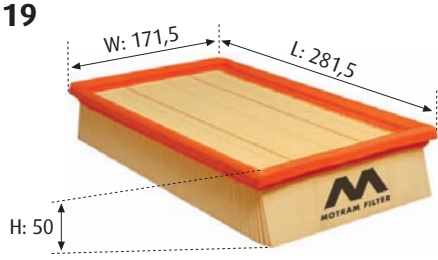

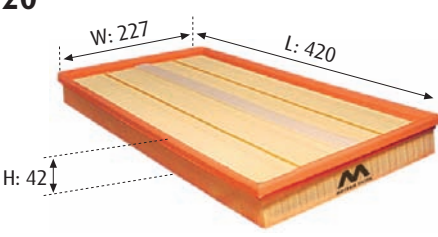

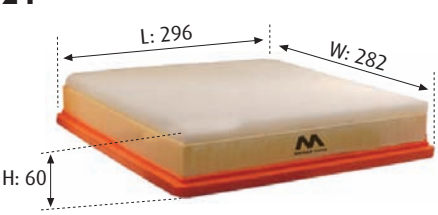

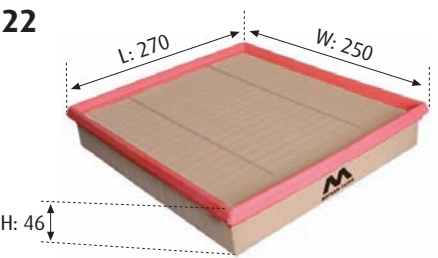

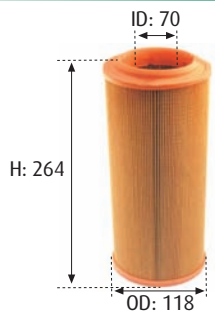

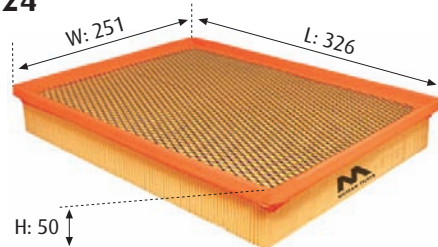

Es el filtro más económico aunque es también muy importante, ya que se sitúa al inicio del circuito de admisión y retiene, en la medida de lo posible, las posibles impurezas que le puedan llegar, evitando la contaminación de la cámara de combustión y la degradación de las paredes de los cilindros.

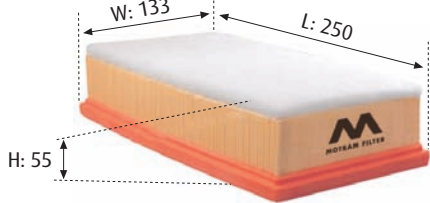

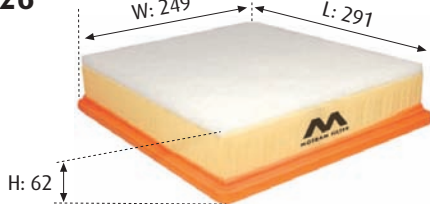

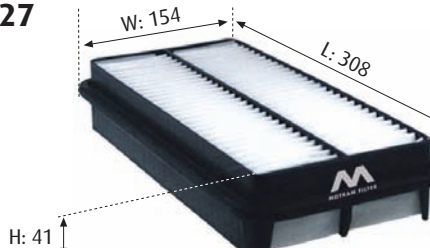

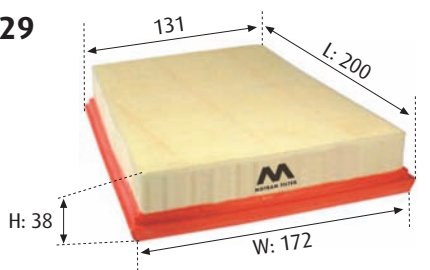

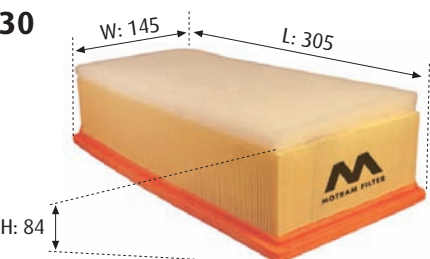

Por tanto influye directamente sobre la vida útil del motor y permite que se reduzca el consumo de combustible, lo que también es un **beneficio para el medio ambiente**.

FILTROS HABITÁCULO

Cabin Filters

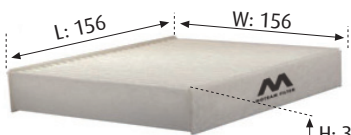

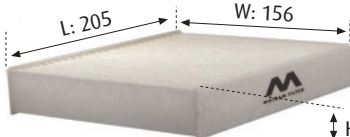

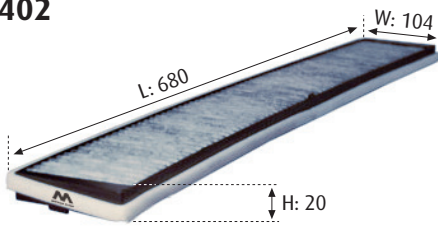

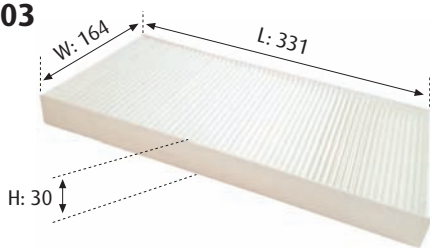

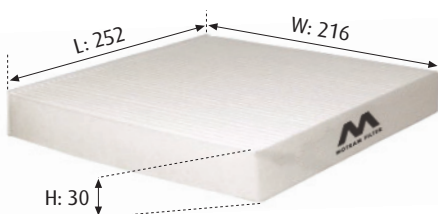

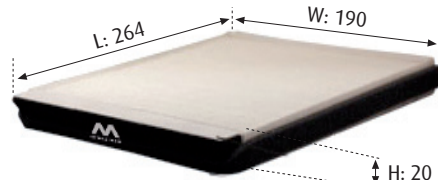

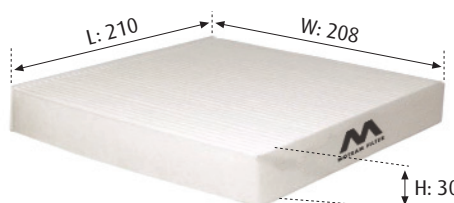

Es el filtro que se suele pasar por alto pero evita que **el polvo, suciedad, polén y otras sustancias que producen alergia** (*entre el 20-25% de la población de Europa las padece, principal causa: polen 86% y hongos 14%*), penetren en el interior del habitáculo del vehículo a través de los conductos del aire acondicionado o calefacción. En el vehículo la concentración de partículas contaminante es 5 veces más alta que en el exterior.

Si el filtro está fabricado con **carbón activado** eliminará también los malos olores.

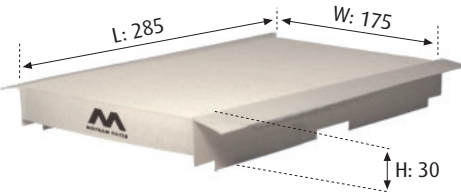

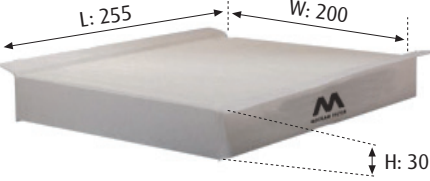

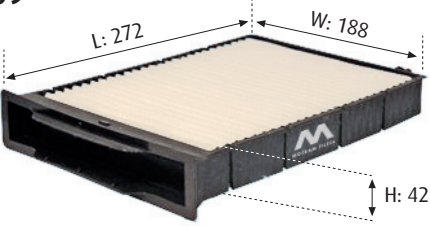

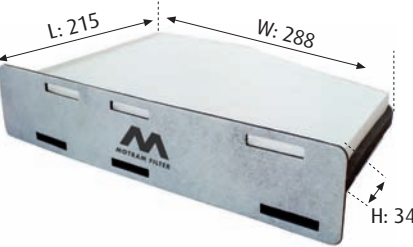

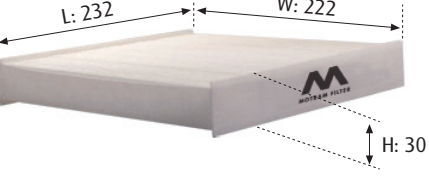

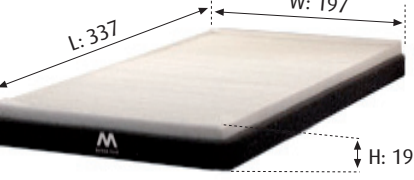

Cuando se empieza a notar una reducción de la entrada del flujo de aire a través del sistema de ventilación hay que cambiar el filtro de cabina sin más dilación.

Si el filtro estuviese muy sucio significaría, no solo que restringiría la entrada de aire en el habitáculo, sino que el sistema de aire acondicionado y calefacción trabajarían más, **(aumentaría el consumo)**.

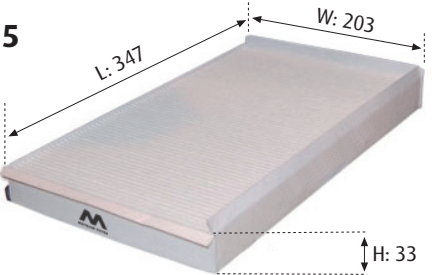

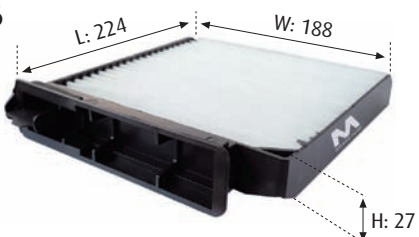

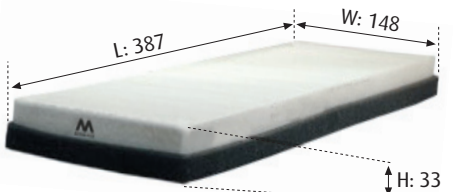

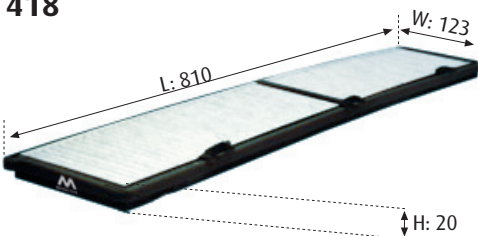

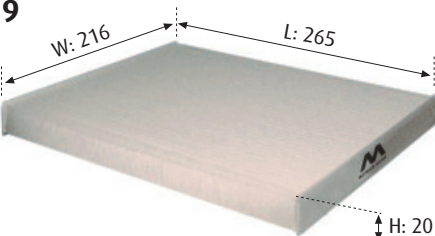

Con el tiempo se podrían **producir fallos** en algunos de los componentes del sistema de ventilación.
